Gentlemen:

Thank you for your inquiry. Enclosed please find the information that you requested describing our CRT display products.

In addition to the plug-in and standardized modular assemblies shown, we design and build custom cathode ray tube systems - experimental as well as operational equipment - for CRT applications such as computer display, scan conversion, radar display, film printing and film reading.

Whether you may be interested in our system capabilities or our product modules, we can help you with your CRT system problems in many ways. At first, perhaps, we can give you pertinent answers to your questions on the ultimate performance possible with a given tube, or we can prepare well-defined performance specifications. Please inquire and you will find that we can produce - competently, quickly, and at low cost.

Sincerely,

BETA INSTRUMENT CORPORATION
